Column	Rows missing
order_id	0
order_date	0
customer_id	0
city	31
product	0
quantity	0
unit_price	0

Pipeline execution summary

Run ID	Status	Raw	Accepted	Rejected	Duplicates
91085f44	success	1020	936	64	20

Methodology and limitations

Revenue = quantity x unit price. One valid row per order ID is retained, prioritising the earliest valid occurrence. Additional occurrences are kept in the duplicate audit. Snapshots replace the active sales fact table on successful runs; historical run audits remain available.

Current snapshot source: Bundled synthetic South African CSV. Bundled South African records are synthetic demonstrations, not measured real-world sales. Uploaded datasets are assumed to use the configured currency; currency is never inferred from CSV fields.
